

WEBMASTER WORK LOG

Date	Task	Time involved	Team member (student initials)	Comments
1. 10/20/24 - 10/28/24	Researching farm-to-table practices, sustainable vegetarian cooking methods, and preparation processes, all while deepening our knowledge of JavaScript and CSS.	3+ hours	V.S. R.K. S.S.	We decided to focus our restaurant "EcoEats" on meeting a wide range of dietary restrictions, ensuring inclusivity and accessibility for all. Our goal was to create a vegetarian restaurant that prioritizes sustainability and responsible sourcing, using only organic and eco-friendly ingredients.
2. 10/29/24 - 11/15/24	Working on creating the base HTML pages for our website and began styling them using CSS/ SCSSS with Bootstrap to ensure a responsive and visually appealing design.	8+ hours	V.S. R.K. S.S.	We implemented key features like a functional navigation bar, footer, and buttons to enhance usability and create a cohesive structure. We customized these elements with simple CSS adjustments to add a little bit of aesthetic.
3. 11/16/24 - 11/24/24	Integrating our research on sustainable practices and dietary inclusivity into the website's content while completing the functional aspects of the site.	8+ hours	V.S. R.K. S.S.	We added our eco-friendly practices prominently on the Home, About, and Menu pages, showing our sustainability and responsible sourcing. We added an interactive ordering page with an active total count that updates as users add food items to their cart. We implemented popup windows displaying confirmation messages for key actions, such as successfully signing up for email updates or completing a booking.
4. 11/25/24 - 12/12/24	Completing our Bootstrap/ CSS, creating visually appealing designs with a cohesive color scheme, polished layouts, and responsive elements that enhance both the aesthetic and functionality.	6+ hours	V.S. R.K. S.S.	We finalized the Bootstrap and CSS styling by incorporating high-quality images and designing a clean, user friendly navigation bar that improves the website's visual appeal. We thoughtfully chose colors, fonts, and logo placement to improve the aesthetic and establish a cohesive brand identity, while the careful use of white space ensured clarity and readability throughout the pages.
5. 12/13/24 - 12/31/24	Adding carefully selected graphics into our website to enhance the user experience, ensuring they complement the content without being too distracting, while reinforcing our eco-friendly and sustainable message.	10+ hours	V.S. R.K. S.S.	We added a spinning salad graphic on the homepage to attract attention while highlighting our eco-friendly message. To improve navigation, an arrow button smoothly takes users back to the top, and text and images fade in as users scroll. Additionally, we incorporated numbers that grow from 0 and hover pop-ups, offering interactive elements that enhance the experience without being too distracting.
6. 1/1/25 - 1/10/24	Making final fixes and adjustments to the website, adding extra features and incorporating some lighthearted, funny elements to give it a uniqueness and engagingness.	3+ hours	V.S. R.K. S.S.	We added a moving carousel featuring funny reviews, a staple for many websites, to bring a playful and engaging element to the site. Along with this, we expanded our menu to include more items, offering a wider variety for our customers to choose from. These final adjustments and features helped give the website a more dynamic, enjoyable feel while keeping the user experience fresh and interactive.
